

# Gardens & Exhibits

## California Native Garden

The California Natives garden showcases collections of plants native to California to help homeowners rediscover our sense of place while saving water.

## Desert Garden

This garden showcases plants that adapt well to the Mediterranean Climate, one with a weather pattern characterized by winter precipitation and hot and dry summers.

## Fragrance Garden

This garden showcases plants that grow well in our Mediterranean Climate, a weather pattern characterized by winter precipitation and long, hot, dry summers.

## Shade Garden

Positioned in the shade of the campus' existing pine trees, the dry shade garden showcases those drought-tolerant plants that grow better in the shade.

## Mediterranean Garden

This garden showcases plants that adapt well to the Mediterranean Climate, one with a weather pattern characterized by winter precipitation and hot and dry summers.

## Groundcovers and Lawn Substitutes Garden

This garden showcases attractive groundcovers and lawn substitutes that can be used in place of higher-water-using turf grass.

Photographs above are samples of the plants located in the garden indicated.

---

## Water Conservation Learning Center

This exhibit features displays about soil, irrigation, design, maintenance and other features of a water conserving landscape. It also contains space for small group instruction.

*Sponsored by: San Bernardino Valley Municipal Water District*

## Upper Watershed Exhibit

This exhibit emulates the Upper Santa Ana Watershed with a dry creek that begins at a small amphitheater and winds through the gardens to the Water Conservation Learning Center.

*Sponsored by: San Manuel Band of Mission Indians*
